Goals

1

Top 3 frequented stations.

2

Total entries for each day of the week for all top 3 stations.

3

Methodology

Data

- Main features in MTA data:
 - Stations
 - Date
 - Time
 - Entries
- The used data from 3 July to 2 October 2021.

Tools

◀ SQLite
&
SQLAlchemy

◀ Pandas
&
Numpy

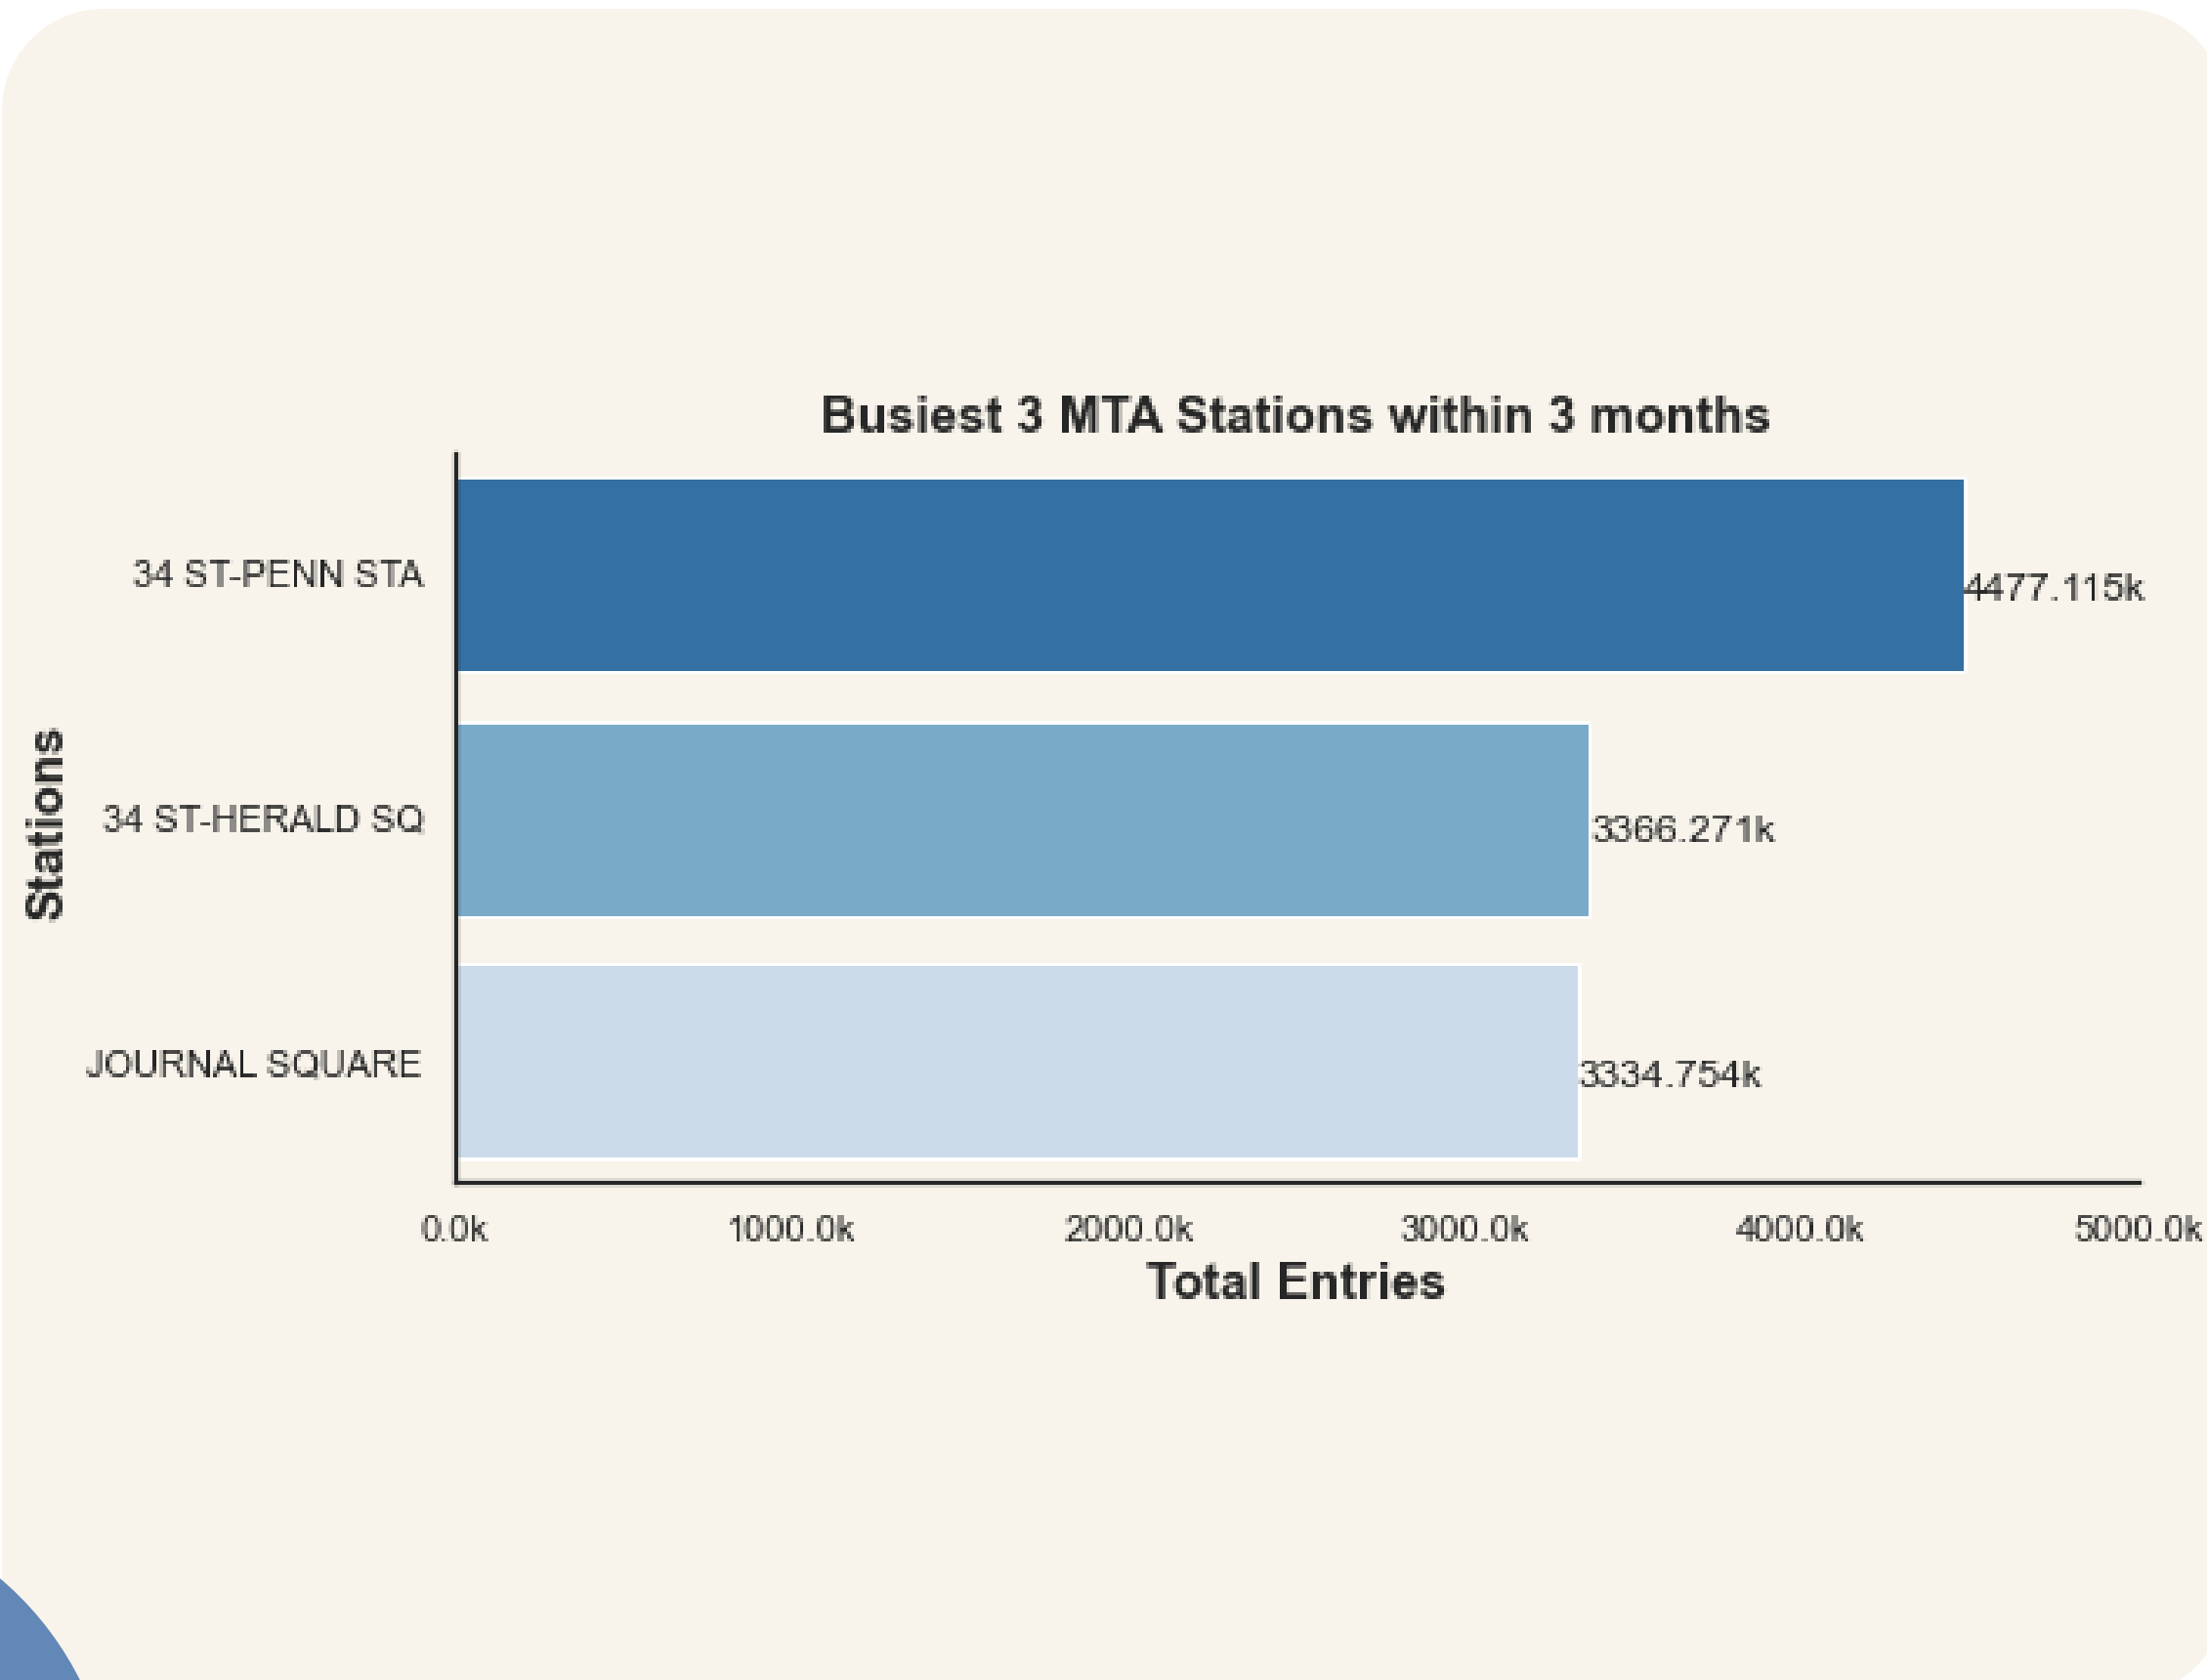

◀ Matplotlib
&
Seaborn

Results & Conclusions

First result

- Vertical axis : Names of top 3 stations.
- Horizontal axis : Number of entries within 3 months at 3 stations.

- Place the 3 billboards at 3 top frequented stations.

Second result

- Vertical axis : Names of top 3 stations.
- Horizontal axis : Days of week.

- The AD price is determined based on the information indicated by the heatmap.

Future Work

Knowing the rush hours

Thank you..
